

## Security Latch Cable Lock Installation Instructions

**Below includes a brief illustration and description of how to set your Security Latch Cable Locks to your desired combination**

**Step 1:** On the top of your locking mechanism you will see a small button on the top. Press the button to release the cable from the lock. To reset your combination, keep the button firmly pressed down.

**Step 2:** While holding the release button down, turn dials to set your lock to the desired combination.

**Step 3:** Still keeping the button firmly pressed down, insert cable back into locking mechanism after desired combination has been set. Once the cable has been inserted into the locking mechanism, release the cable release button. Your cable lock has now been reset to the desired combination.

**Note:** All cable lock are pre-set to **0-0-0**. We suggest setting all cable locks to the same combination so that they are easy to remember. There is no way to unlock a cable lock without having the combination that has been set.
