

Expel Biodegradable Graffiti Remover

for Masonry!

Specially designed for use by School Districts!

Product Features:

1. Expel™ works on Concrete, Brick, Cinder Block, Slate, Marble, Granite, Stucco, Terra Cotta and many other surfaces!
2. Expel™ is formulated using only biodegradable ingredients.
1. Expel™ is non-flammable for worker and transportation safety.
2. Expel™ contains no carcinogens (such as methylene chloride).
3. Expel™ is a thin liquid offering the following advantages over thickened products:
 - A) Expel™ is sprayed onto graffiti, not brush applied, eliminating brushing tools and dramatically reducing application labor costs by at least 75%.
 - B) Expel™ covers two or more times the square foot coverage compared to thickened products.
 - C) Expel™ containers are easily and completely emptied eliminating wasted product remaining in containers.
 - D) Expel™ easily soaks deep into the pores of masonry where the graffiti lies and brushed products can't get at.
 - E) Quicker product application and effective performance on highway roadsides, underpasses and overpasses, reduces worker exposure time to dangerous high-speed vehicles allowing for a faster return to unrestricted traffic pattern.
4. At temperatures well below 0°F., Expel™ remains a liquid. This and other characteristics makes Expel™ a product that performs year round, other products fail at 40° to 60°F. ambient or surface temperatures.
5. Expel™ makes anti-graffiti coatings obsolete!

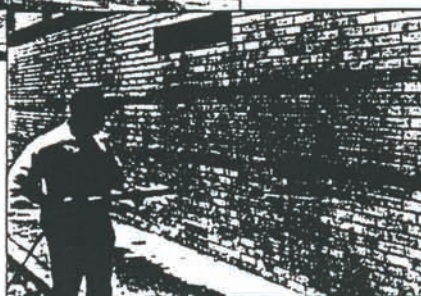

How to remove graffiti:

1. Spray Expel™ onto graffiti using Sprayer™.
2. Let Expel™ soak into masonry for 30 minutes.
3. High pressure rinse away.
